

WILLIAM JOHNSTON **& COMPANY LIMITED**

Description

Cotton Jelly packing is a firm packing made from the finest cotton blended with synthetic jelly to provide a high wet strength with in contact with sea water. It is an excellent general service packing for use in fresh or sea water and is an ideal choice for marine and water transfer applications. It can be used in rotary, reciprocating & calve applications and on slow running stern shafts.

Applications

Natural cotton based packing designed specifically for high-integrity fresh or seawater applications.

Highly suitable as stern gland or rudder post packing.

Very easy to install, even in restricted areas.

Proven as a suitable packing for arduous fresh or salt water pump applications.

Chemical Compatibilities

For the pH range 5-9, the packing is chemically inert.
