Pipeline Accessories

PSI Anti-Corrosion Tapes

PSI Anti-Corrosion Tapes

The Systems

PSI anti-corrosion tapes have been specially developed for high-quality, on-site corrosion protection for joints, in cases where the pipeline has already been installed.

The material is easy, safe and quick to apply on welded joints, bends and other complicated shapes.

The systems fulfil the requirements of DIN 30672 and EN 12068, and they are also DVGW-approved.

Duo40 extra one-tape-system

Class C/50 according to EN 12068/
DIN 30672, four layers

DVGW-Reg.-No.: NV-5180BR0557
ÖVGW-Reg.-No.: G2.945

Duo40 extra, 2 x 50% overlap,
PSI-Primer HT extra
Total thickness 3,2 mm

Adhesive
PE-carrier
Adhesive

System for high quality coating of field-welded joints, complete pipes, bends and complicated shaped parts in all pipe diameters.
The system is suitable when high shear resistance is required. It is possible to wrap by hand, although we recommend wrapping by machine.

Duo 40 extra is a very effective asymmetric three layer anti-corrosion tape, which amalgamates to a homogeneous coating. The soft butyl rubber allows application over a wide area without leaving any gaps.

MonoTop40 one-tape system

Class B/30 according to
EN 12068/DIN 30672

DVGW-Reg.-No.: NV-5180BQ0144

MonoTop40, 1 x 50% overlap,
PSI-Primer P27
Total thickness 2.03 mm

PE backing
Adhesive

System for application on field-welded joints, complete pipes, bends and complicated shaped parts up to ND 600.
Because of the system's **high flexibility**, it is perfect for hand wrapping without a wrapping machine.

MonoTop 40 is a very strong anti-corrosion tape which amalgamates to a homogeneous coating with a very flexible plastic surface.

1400	56	1422	100	0.45	38.60	3.86	77.21	7.72
1500	60	1524	100	0.48	41.37	4.14	82.74	8.27
1600	64	1626	100	0.51	44.14	4.41	88.28	8.83

The above-mentioned quantities include an allowance of approx. 8%, because in practice slightly more than 50% overlap is wrapped and existing coatings with different thicknesses and diverse welded-joint systems, for example welded socket joints, are not recorded separately in this table.

The indicated primer consumption is based on average historical values and can differ according to the application method and the type of primer.

PSI ALU TOP 30 provides protection against corrosion and UV for pipelines laid above ground.

Alu Top 30 is a high-quality, self adhesive corrosion protection tape (cold applied), based on butyl rubber with an outer layer consisting of plastic-modified aluminium. The material offers the optimum in UV protection; the tape can be slightly stretched during use without breaking the aluminium layer. The system is particularly suitable for coating entire pipe sections, bends and irregularly shaped parts and for providing protection against UV rays. Thanks to its exceptional flexibility, it is particularly suitable for application by hand. As a rule, the system is treated with primer V and is wound on with a 50% overlap.

Storage:

The product should be protected against direct sun exposure and should be stored with 10°C to 30°C. Rolls should be kept dry and standing on end.

Technical data	PSI Alu Top 30	Test method
Mass per unit area:	app. 1.9 kg/m ²

DVGW-approval	no	

Butyl Bar - shapeless sealant, clay

Properties:

- self-adhesive
- can be processed manually
- soft plastic
- vibration reducing between wing parts
- free of solvent
- non-shrinking
- water-resistant and durable

Application:

- filler for molded parts during corrosion protection
- closing of cable and pipe penetrations, drillings und bevel
- barrier material before filling in insulating foam
- assembling aid in case of additional use of construction adhesives or mechanical fastenings

Processing:

The processing is carried out by hand. The required quantity of sealant is to be put into the desired form by hand or with a trowel at the place of installation.

Surface underneath:

The substrate must be clean, dry and free of dust.

PSI Anti-Corrosion Tapes

Application Instructions

Cleaning:

Prepare the pipe according to DVGW-instructions GW 15: **dry**, clean, grease-free and rust-free.

Chamfer the edges of the existing coating, to guarantee that cavities are clear.

Roughen the existing coating, at least 100 mm, with an abrasive cloth.

Drying

Primer:

Make sure PSI-primer is well **stirred**. Primer is applied to the dried and cleaned surfaces, including at least 100 mm of the existing coating on both sides.

The **curing time** is approx. 10 minutes - please make a touch test to check!

When the primer has been applied for more than 4 hours, the pipe must be primed again. When the joint has been dried with a flame for a second time, the pipe must be primed again.

Tape application in general:

All tapes are applied around the pipe using a spiral wrapping under constant strong tension with at least 50% overlap. The protective foil must be removed. The existing coating must be overlapped by at least 50 mm. For systems which require a double wrap, the outside layer must extend beyond the inside layer.

Please note that the tapes, as well as the pipe surface, have a temperature of at least 10C°.

Application of the systems:

Duo 40 extra: one-tape system, class C/50, according to EN12068/DIN 30672, two layer with 50% overlap (4 layers)

MonoTop 40: one-tape system, class B/30 acc.to EN12068/
PSI Primer P27 DIN 30672 one layer with 50% overlap (2 layers)

PSI Anti-Corrosion Tapes

ISO Petrolatum tape

Description:

The PSI ISO petrolatum tape is suitable for pipeline coating. It can be used for house connections and fittings, but is particularly suitable for complicated parts such as T-pieces in connection with petrolatum filling material.

The PSI petrolatum tape can be applied directly on PE-pipes. This tape is compatible with work wrappings from PE, PP and epoxy resin.

The PSI ISO petrolatum tape is an anti-corrosion binding with a chemical-fibre base material (100g/m²), coated with modified petrolatum on both sides. It is highly adhesive and elastic, and has a high softening point. The PSI ISO petrolatum tape is coated with a PE foil on the out-side. This foil is a diffusion-tight mechanical protection.

Application instructions:

Cleaning:

Prepare the pipe according to DVGW-instructions GW 15: **dry**, clean, grease-free and rust-free. The PSI ISO petrolatum tape - uni is to be used **without primer!**

Filler:

Fill cavities and round off sharp corners with petrolatum filler.

Application:

The tape should be wound on in **two layers**. We recommend that the first layer be wound on with a 50% overlap. The outer layer should be wound on in a spiral pattern with a 10 mm overlap. The joints with the existing factory coating should be included with a minimum 50 mm overlap in the winding all round. Care should be taken to ensure that the **PE backing** is on the outside. Ensure that the winding is free of puckering and air pockets.

Finally, press down the tape firmly and smooth by hand, particularly in the overlapping area. If subjected to severe mechanical loadings, the additional application of PSI fleece to protect the pipe is strongly recommended.

Technical specifications:

Roll length:	10 m
Width:	50 100 150 200
Weight:	approx. 1.0 Kg/m ²
Thickness:	approx. 1.5 mm
Colour:	beige to brown
DVGW approval class	A/30
DIN	30672/EN12068

DVGW-Reg.-No.: NG-5180B0011

PSI Anti-Corrosion Tapes

ISO Bitumen Tape GG

Description:

The PSI ISO bitumen tape - GG is made for coating field-welded joints and fittings, and, in particular, for complicated parts such as flanges and T-pieces.

The PSI ISO bitumen tape GG is compatible with work wrappings like PE, PP or epoxy resin.

The PSI ISO bitumen tape - GG consists of a fibreglass base material, which is coated on both sides with modified bitumen.

The material has a PE foil on one side.

The binding is a warm-applied anti-corrosion tape with high elasticity.

Application instructions: (example: welded joint)

Cleaning:

Prepare the pipe according to DVGW-instructions GW 15: **dry**, clean, grease-free and rust-free.

Preheating:

Heat the weld area including approx. 100 mm of the existing coating with a gentle flame up to approx. 40-50°C.

Primer:

Make sure V-primer is well **stirred**. Primer is applied to the dried and cleaned surfaces, including at least 100 mm of the existing coating on both sides.

The **curing time** is approx. 10 minutes - please make a touch test to check!

When the primer has been applied for more than 4 hours, the pipe must be primed again. When the joint has been dried with a flame for a second time, the pipe must be primed again.

Tape application:

ISO GG bitumen tape is applied to form a sleeve (strips) with the backing strip facing **outwards**.

The tape should be cut into lengths equivalent to the **circumference of the pipe plus 30 mm**. It is heated with a propane gas flame on the inside until the bitumen flows. It is then applied to the preheated surface under tension and free of puckering, and pressed well down. In the overlapping areas (30 mm from layer to layer), **the backing must be burned off beforehand**. After the strips have been applied, the overlapping areas **should be heated again and smoothed with a spatula**.

Technical specifications:

Roll length:	10 m
Width:	100 200 300 500 (special width available)
Thickness:	minimum 4 mm
DVGW approval class	B/30
DIN	30672/EN12068

DVGW-Reg.-No.: NG-5180AR0826

Corrosion Protection Tape PSI-Flex

Product Datasheet

Corrosion Protection Tape PSI-Flex for irregularly shaped parts

This tape was specially developed to provide effective corrosion protection for irregularly shaped steel pipeline components, such as T-joints and weld-on T-joints.

PSI-Flex can be applied cold, but pipe preparation must be carried out in accordance with DVGW notice GW 15. The tape stands out by virtue of its exceptional flexibility, particularly on edges and in corners. It can be lightly stretched and is resistant to acids and bases, fungi and micro-organisms.

No primer is required. The tape is self-sealing and presses firmly against the substrate due to the high restoring force of the PE layer, which also serves as a vapour barrier. It should be applied with a 50% overlap minimum.

Type	Widthness	Roll-length	Art. no.	Unit
Corrosion Protection Tape PSI-Flex 50-5	50 mm	5 Meters	4-034-21001	24 pcs.
Corrosion Protection Tape PSI-Flex 100-5	100 mm	5 Meters	4-034-21002	12 pcs.
Filler 3.5 mm	50 mm	7.5 Meters	4-015-21498	24 pcs.

Technical Data

Inner layer	Butyl
Outer layer	Polyethylenefoil app. 80 μ
Application	+5°C up to +40°C temperature
Electrical resistance	15 kV/mm
For continuous operating temp.	from -30°C till +80°C
Elongation at break	> 300%
Overall single layer thickness	approx. 1.5 mm
Color	aluminiumgrey

Corrosion Protection Tape PSI-Flex

Application Instruction

Outer-wrap for irregular shaped pipeline components such as T-joints, weld-on T-joints or pipe bends.

Cleaning:

Prepare the pipe in accordance with DVGW worksheet GW 15, removing rust, grease and dirt (wire brush, PE cleaning fluid).

Drying:

Dry the area to be wrapped by heating to approx. 50°C.

Caution: PSI Flex is used **without any primer**.

Filler:

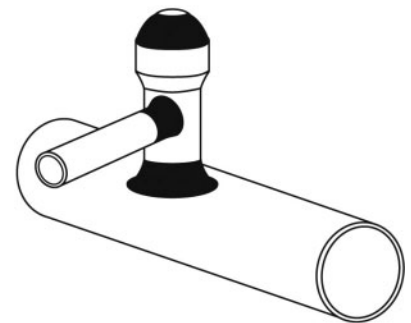

Work filler into acute angles and cavities and round off. Finally, heat and smooth the filler.

Installing:

After removing the protective liner, wind PSI Flex tautly onto the pipe, taking care not to overstretch it. Press it down with the thumbs in right angles.

For two-layer wrapping, a winding with at least 50% overlap is required. 50 mm overlap to the mill coating is required.

The work can be considered completed when the tape is secured free of bubbles and all the required overlaps have been observed. We expressly exclude any other use of the material. The PSI guarantee is restricted to faulty material. The suitability of the product for a special purpose must be tested by the user on his own responsibility.
